WHAT IS PYTHON?

Python is a widely used high-level programming language for general-purpose programming, created by Guido van Rossum and first released in 1991. Python features a dynamic type system and automatic memory management and supports multiple programming paradigms including object-oriented, imperative, functional programming, and procedural styles. It has a large and comprehensive standard library. Python is a general-purpose interpreted, interactive, object-oriented, and high-level programming language. Python has been one of the premier, flexible, and powerful open-source languages that is easy to learn, easy to use, and has powerful libraries for data manipulation and analysis.

TWO MAJOR VERSIONS OF PYTHON ARE CURRENTLY IN ACTIVE USE:

- > Python 3.x is the current version and is under active development.
- > Python 2.x is the legacy version and will receive only security updates until 2020. No new features will be implemented. Note that many projects still use Python 2, although migrating to Python 3 is getting easier.

WHO CAN DO PYTHON COURSE?

Software Professionals such as Programmers, Web Developers, ETL Developers, Analytics Professionals, Automation Engineers, Hadoop Programmers, Project Managers, and even beginners, students, any working professional can learn Python to compete well and to ensure their success in the IT sector.

PRE-REQUISITES FOR PYTHON TRAINING

There are not any explicit stipulations to be told for doing Python course however basic information in any of the artificial languages is extra a worth advantage.

PYTHON TRAINING COURSE IN CHENNAI

HB Services provides the best Python course in Chennai with Job Support (Placements). Python Training covers how to create scripts that manipulate data, automate tasks, perform error handling and store and retrieve data by using relational databases and XML files.

- Python is open source (Cost saving)
- Python has relatively few keywords, a simple structure, and a clearly defined syntax. This allows the student to pick up the language in a relatively short period of time.
- Python comes with a large collection of prebuilt and portable functionality known as the standard library. Python has more than 20 Thousand modules. Every new development comes very early in Python like Hadoop interface, Raspberry Pi, and many more!
- Python can run on a wide variety of hardware platforms and has the same interface on all platforms.
- You can add low-level modules to the Python interpreter. These modules enable programmers to add to or customize their tools to be more efficient.
- ▶ Django framework might be the most famous Python web framework, there is also a host of successful small and micro-frameworks.
